TECHNOLOGY NEWS

Introducing Sidco's New State of the Art Tag & Pouch Printer with Nice Label Software

A tag or pouch must be a container, an information medium and at the same time an advertisement for your product - expectations which our new Tag & Pouch Printer satisfies completely. It processes highgrade offset quality tags and pouches which endorse the quality of your products. The combination of first-class tags, pouches and streamlined, flexible printing of easily varied data by this printer is unmatched.

Tag and Pouch Printer

This printer has surpassed the thermal transfer technology and print quality in the form of the Near Edge printhead. The 12 dots/mm resolution guarantees excellent print and your tags are more than just presentable. The print speed is up to 10 inches per second which delivers a very high output rate.

The print width of 5.03 inches and the tag widths from 1.19 inches up to 6.06 inches cover almost every type of application. Tags as small as 1.19 inches x 1.97 inches can be imprinted with the Short Tag option. Tags can be imprinted on the front and back, by printing then reversing the tags. Single tags, fanfold tags, foil pouches and folded instruction sheets can all be employed.

A combination of several features delivers the outstanding efficiency of

this printer. On the one hand, the highly efficient automatic ribbon-saving mechanism, which can activate when non-print areas exceed .40" contributes enormously to reducing the cost of ribbon. When using ribbon or foil, the width can be adjusted to match actual printing width which also avoids wasting material.

The printer comes with features such as: an automatic lifting tray, a collection tray or a power stacker. Call today for more details!

Label Software:

NiceLabel Pro is full-featured software designed for professional label design and printing, including complete database support and integration options.

A wide range of features and options makes it a perfect and easy-to-use tool for any labeling requirement.

- Powerful, label designer
- Specialized bar code wizards for UCC/EAN 128 and HIBC bar code format
- Advanced database connectivity for any type or amount of data
- Advanced label tracking

and user management

- Visual Basic scripting
- RFID smart label interface

By making use of a full-featured set of label design Wizards, even beginners are able to create labels quickly and easily. Any label layout can be designed by combining Windows and printer fonts, bar codes, drawing elements and graphics files. Flexible design tools, presented in a user interface that conforms to the latest Windows standards, help users create labels accurately. Labels can include a wide range of variable fields such as prompted values, serialized fields and date and time stamps.

NiceLabel software provides support for all industry-standard bar codes, including 2-D. With multiple options for check-digit calculation, any possible requirement can be supported. If you would like a demonstration please call us for an appointment
